

TELCOR Point of Care

Saving time and money, enhancing workflow and supporting patient safety initiatives

QML, TELCOR's industry leading point of care information and interface management solution, was designed specifically to support the management and reporting requirements of the expanding point of care testing market. It manages information from the most point of care device types to the most LIS/EMRs.

Comprehensive information management

- Eliminate errors, omissions and delays associated with manual charting of patient and QC results
- Manage operator certifications and device activities
- Provide a complete audit trail for all point of care activity
- Access to any subset of data for troubleshooting and/or quality management statistics
- Meet departmental, CAP, JCAHO and other accrediting agency requirements

Exception-based rules engine

- Validate patient IDs through an ADT interface and/or comprehensive format rules
- Define result auto-verification rules by result values and/or flags for real-time and/or retrospective review
- Monitor results performed by invalid operators on new devices with new reagents, etc.
- Define configurations unique to device(s), location(s) and result type(s)
- Ability to customize the system to work for your organization through hundreds of user accessible configuration options

Report Plug-ins

- Architected for rapid report development
- Each report is its own component
- Installed independent of any other report or QML version
- Accessed from a desktop icon or the QML Addons menu
- Provided at no additional cost
- Enhances current QML Reporting capabilities

TELCOR Point of Care

Saving time and money, enhancing workflow and supporting patient safety initiatives

Comprehensive device and LIS/EMR connectivity

- Proven solution connecting point of care results to the LIS/EMR at more than 1,200 hospitals
- Automated results transmission from more than 80 different device types
- Completely open vendor offering connectivity for ALL point of care devices
